uzyexe (/u/uzyexe/)/nmap (/r/uzyexe/nmap/). ☆

Last pushed: 3 months ago

[Repo Info \(/r/uzyexe/nmap/\)](#)

### Short Description

nmap container image (size: 14.93MB)

### Full Description

 15 MB / 11 Layers (<https://imagelayers.io/?images=uzyexe/nmap:latest>)

## uzyexe/nmap

This is nmap container.

## What is nmap

Nmap ("Network Mapper") is a free and open source (license) utility for network discovery and security auditing.

<http://nmap.org/> (<http://nmap.org/>).

## Dockerfile

**Trusted Build** (<https://registry.hub.docker.com/u/uzyexe/nmap/>).

This Docker image is based on the [progrium/busybox](https://registry.hub.docker.com/u/progrium/busybox/) (<https://registry.hub.docker.com/u/progrium/busybox/>) base image.

## How to use this image

```
-rm -v "$(pwd)":/data uzyexe/nmap [Scan Type(s)] [Options] {target spe
```

## Case 1: Simple Scan

```
docker run --rm uzyexe/nmap example.com
```

## Case 2 : Port-80 Simple Scan

```
docker run --rm uzyexe/nmap -p 80 example.com
```

Help

Nmap 7.12 ( <https://nmap.org> )

Usage: docker run --rm uzyexe/nmap [Scan Type(s)] [Options] {target specification}  
TARGET SPECIFICATION:

Can pass hostnames, IP addresses, networks, etc.

Ex: scanme.nmap.org, microsoft.com/24, 192.168.0.1; 10.0.0-255.1-255

-iL <inputfilename>: Input from list of hosts/networks

-iR <num hosts>: Choose random targets

--exclude <host1[,host2][,host3],...>: Exclude hosts/networks

--excludefile <exclude\_file>: Exclude list from file

#### HOST DISCOVERY:

-sL: List Scan - simply list targets to scan

-sn: Ping Scan - disable port scan

-Pn: Treat all hosts as online -- skip host discovery

-PS/PA/PU/PY[portlist]: TCP SYN/ACK, UDP or SCTP discovery to given

-PE/PP/PM: ICMP echo, timestamp, and netmask request discovery probes

-PO[protocol list]: IP Protocol Ping

-n/-R: Never do DNS resolution/Always resolve [default: sometimes]

--dns-servers <serv1[,serv2],...>: Specify custom DNS servers

--system-dns: Use OS's DNS resolver

--traceroute: Trace hop path to each host

#### SCAN TECHNIQUES:

-sS/sT/sA/sW/sM: TCP SYN/Connect()/ACK/Window/Maimon scans

-sU: UDP Scan

-sN/sF/sX: TCP Null, FIN, and Xmas scans

--scanflags <flags>: Customize TCP scan flags

-sI <zombie host[:probeport]>: Idle scan

-sY/sZ: SCTP INIT/COOKIE-ECHO scans

-sO: IP protocol scan

-b <FTP relay host>: FTP bounce scan

#### PORT SPECIFICATION AND SCAN ORDER:

-p <port ranges>: Only scan specified ports

Ex: -p22; -p1-65535; -p U:53,111,137,T:21-25,80,139,8080,S:9

--exclude-ports <port ranges>: Exclude the specified ports from scan

-F: Fast mode - Scan fewer ports than the default scan

-r: Scan ports consecutively - don't randomize

--top-ports <number>: Scan <number> most common ports

--port-ratio <ratio>: Scan ports more common than <ratio>

#### SERVICE/VERSION DETECTION:

-sV: Probe open ports to determine service/version info

--version-intensity <level>: Set from 0 (light) to 9 (try all probes)

--version-light: Limit to most likely probes (intensity 2)

--version-all: Try every single probe (intensity 9)

--version-trace: Show detailed version scan activity (for debugging)  
OS DETECTION:

- O: Enable OS detection
- osscan-limit: Limit OS detection to promising targets
- osscan-guess: Guess OS more aggressively

#### TIMING AND PERFORMANCE:

- Options which take <time> are in seconds, or append 'ms' (milliseconds), 's' (seconds), 'm' (minutes), or 'h' (hours) to the value (e.g. 30ms).
- T<0-5>: Set timing template (higher is faster)
  - min-hostgroup/max-hostgroup <size>: Parallel host scan group sizes
  - min-parallelism/max-parallelism <numprobes>: Probe parallelization
  - min-rtt-timeout/max-rtt-timeout/initial-rtt-timeout <time>: Specify probe round trip time.
  - max-retries <tries>: Caps number of port scan probe retransmissions
  - host-timeout <time>: Give up on target after this long
  - scan-delay/--max-scan-delay <time>: Adjust delay between probes
  - min-rate <number>: Send packets no slower than <number> per second
  - max-rate <number>: Send packets no faster than <number> per second

#### FIREWALL/IDS EVASION AND SPOOFING:

- f; --mtu <val>: fragment packets (optionally w/given MTU)
- D <decoy1,decoy2[,ME],...>: Cloak a scan with decoys
- S <IP\_Address>: Spoof source address
- e <iface>: Use specified interface
- g/--source-port <portnum>: Use given port number
- proxies <url1,[url2],...>: Relay connections through HTTP/SOCKS4 proxies
- data <hex string>: Append a custom payload to sent packets
- data-string <string>: Append a custom ASCII string to sent packets
- data-length <num>: Append random data to sent packets
- ip-options <options>: Send packets with specified ip options
- ttl <val>: Set IP time-to-live field
- spoof-mac <mac address/prefix/vendor name>: Spoof your MAC address
- badsum: Send packets with a bogus TCP/UDP/SCTP checksum

#### OUTPUT:

- oN/-oX/-oS/-oG <file>: Output scan in normal, XML, s|<rIpt kIddi3, and Grepable format, respectively, to the given filename.
- oA <basename>: Output in the three major formats at once
- v: Increase verbosity level (use -vv or more for greater effect)
- d: Increase debugging level (use -dd or more for greater effect)
- reason: Display the reason a port is in a particular state
- open: Only show open (or possibly open) ports
- packet-trace: Show all packets sent and received
- iflist: Print host interfaces and routes (for debugging)

```
--append-output: Append to rather than clobber specified output file
--resume <filename>: Resume an aborted scan
--stylesheet <path/URL>: XSL stylesheet to transform XML output to HTML
--webxml: Reference stylesheet from Nmap.Org for more portable XML
--no-stylesheet: Prevent associating of XSL stylesheet w/XML output
```

#### MISC:

```
-6: Enable IPv6 scanning
-A: Enable OS detection, version detection, script scanning, and tracer
--datadir <dirname>: Specify custom Nmap data file location
--send-eth/--send-ip: Send using raw ethernet frames or IP packets
--privileged: Assume that the user is fully privileged
--unprivileged: Assume the user lacks raw socket privileges
-V: Print version number
-h: Print this help summary page.
```

#### EXAMPLES:

```
nmap -v -A scanme.nmap.org
nmap -v -sn 192.168.0.0/16 10.0.0.0/8
nmap -v -iR 10000 -Pn -p 80
```

SEE THE MAN PAGE (<https://nmap.org/book/man.html>) FOR MORE OPTIONS AND

#### Docker Pull Command

```
docker pull uzyexe/nmap
```

#### Owner
