nmap2nagios-ng is a perl-script for generating object configuration files from the XML output of the Port- and Securityscanner Nmap automatically.

Features include the ability to transform Nmap XML-Output to Nagios object configuration files with:

- automated detection of the operating system and building a according hostgroup
- generating of host- and servicetemplates, which can be adjusted via the nmap2nagios-configurationfile
- customizing for Nagios v2.x or v3.x
- the room to be changed by the users without any programming skills

Single node usage:

```
nmap -sS -O -oX 192.168.100.1.xml 192.168.

./nmap2nagios-ng.pl -i -z -r 192.168.100.1
```

Subnet:

```
nmap -sS -O -oX subnet.xml 192.168.1.*

./nmap2nagios-ng.pl -i -z -r subnet.xml -o
```
